

ALL DAY FENCING

Heavy Duty Double Swing gates opener

With, Folding Arms, Limit switches
Slow Down Opening and Closing
Pedestrian Entry (single gate will open)
Computerized control panel with endless
features

Whether you in the car, walking the dog, doing the gardening or setting inside your home, you simply press the remote control button and your gate will open and if you like you can have a courtesy light come on while the gate is operating, using the same remote you can also operate your garage door or other devices (Extra receivers available).

This complete kit with mechanical swing arm is ideal for Double gate operation but also can be used on single gate, it comes with durable weather proof 12VDC motors with limit switches, folding arm linkages, 12V DC battery, 2 remote controls, computerized special purpose weather proof control panel with self programming, all brackets, cables, bolts and nuts, installation instruction and 12 months GUARANTEE

The motors are strong, quiet and long lasting, the system is suitable for heavy and light gates up to 500kg and 4.5m wide without a lock or up to 6m with the use of a lock, the gates will slow down at the end of Opening and Closing operation avoiding crashing sounds and there is NO need for physical stops in the ground, once the gate is closed it can't be pushed open by intruders.

Motors: Heavy duty hard wearing neat and compact 12DC motors

Heavy Duty Operator: Swing gate operator for gates up to 500Kg and 6m wide

Control Panel: Latest digital technology control panel

Battery: 4 Ah battery back up

Remote Controls: 2 Remote controls, 4 button programmable (self teaching) high security rolling code for the convenience of operating up to any three different roller doors or garage doors (extra remotes available, extra receivers available)

Photocell - Keypad - Key Switch etc: Option for installing additional controls such as Photocell - Keypad - Key Switch or any other switching device

Pedestrian entry option: The system allows you to open a one gate only to allow pedestrians to enter

Over-Ride Keys: Over ride key release to put the gates on manual in case of emergency.

Slow Down Speed: The gate slows down automatically at the end of closure and opening for smooth and safe operation.

Limit Switch: No need to have a physical gate stops due to a built-in adjustable cam and limit switch

Learning Cycle System: The unit's computerized control panel learns the operating time-cycle of each gate and sets itself automatically to slow down at the end of closure and opening.

Sealed Casing: Water proof / dust proof Control panel and motors to prevent insects, dust

and rain from damaging the unit to and ensuring long lasting operation.

Safety Anti-Crash Sensor: Built-in over-current sensor protects the motor from damage in case the gate closes on an object accidentally

Option for Safety Sensor: With ZERO Current consumption on stand by.

Auto-Close Operation: Programmable dip switch YES / NO for automatic gate closer with timer

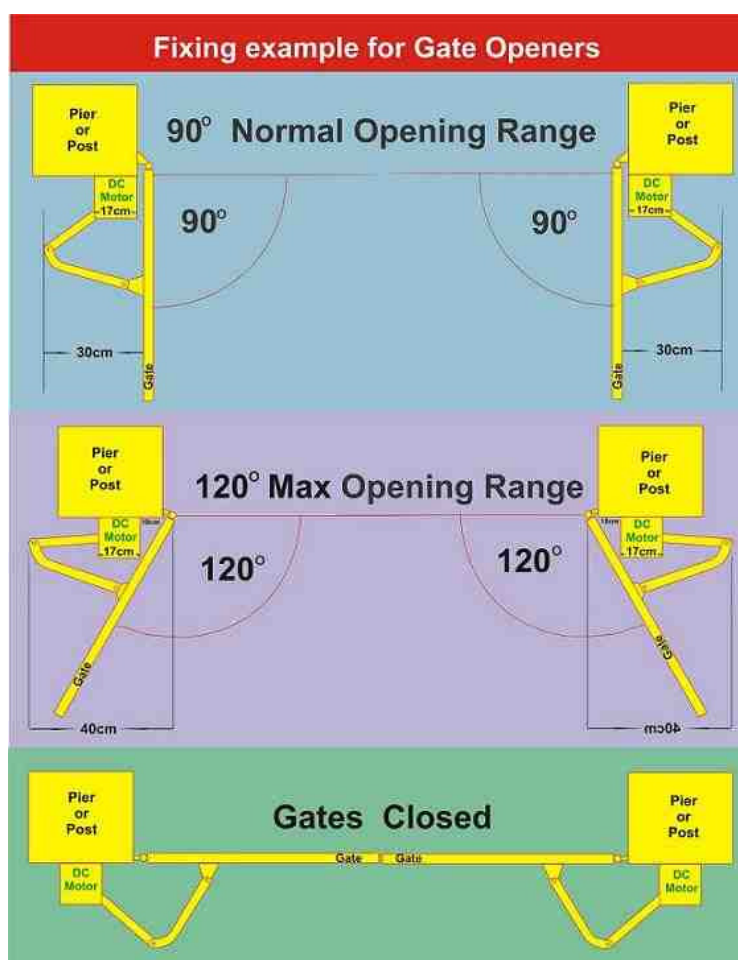

Double or single gate: Programmable dip switch giving option of single or double gate installation

Electric Lock: The controller can power and operate electric and magnetic locks, an all in one operation, when the remote is pressed to open the gate the lock gets energized first and the gate follows.

Photoelectric Sensor: Facility to operate photoelectric sensors, a must when automatic close is chosen to avoid damage to persons or vehicles .

Opening inward: Opening Angle up to 120°

Courtesy light: Relay output for courtesy light of 12V, or 240V during operation, and will switch off after 5 minutes

Includes;

- 2 Heavy Duty DC motors with DC cable
 - * Digital Control panel, pre wired
 - * All Brackets needed and bolts, nuts, bushes and washers
 - * 1 x 12v 4Ah Batteries
 - * 2 Remote controls (more available see upgrade list below)
 - * DC Cable for motors to control panel
