

FIRST IMPRESSIONS COUNT!

Design

Traditional to contemporary designs for swing and sliding applications. Superior quality engineered mortise and tenon construction. DIY kits available!

Transform your home and increase value, while simultaneously addressing security and privacy concerns with our range of solid timber feature gates.

**LIMITED
25 YEAR
WARRANTY**

Timber

Constructed from plantation grown radiata pine, the timber is finger jointed to produce a defect free board that resists cracking, bowing or twisting.

Preservative

Radiata pine is treated with new generation organic preservative (H3) which increases durability against decay, resists insect attack and is guaranteed to last in excess of 25 years!

Primer

Gates are coated with a revolutionary blue primer with greater flexibility and UV resistance, specifically designed to coat solvent based timber preservatives. Just add your colour!

Paint

Finish with 2 coats of a quality exterior paint within 4 weeks of installation. Light coloured paints are advised to help control the temperature of the timber and increase the life of the product.

Installation

Mount your gates 40mm above the ground with an 8mm clearance on both sides. Fix with 150mm galvanised steel 'T' hinges screwed to the rear face of your gate and post. Secure with a galvanised steel gate latch. Gates can be trimmed up to 20mm.
