

Workplace Safety Guide

Workplace safety starts with you!

Safety First

From large developments to small jobs, safety practices must be observed. Working on boundary fences or screens is important as the works impact on more than just your privacy or safety.

Before starting work it should be clear as to the forms of temporary fencing or barricading that may be required during the course of the work. Temporary fencing may be required to retain household pets, protect residents or restrict public access.

Thought must be given to the safety of neighbours or the public due to the risk posed from the proposed works. It is also advised to have on hand a suitable first aid kit in case of emergencies.

Below is a list of suggestions designed to comply with the workplace safety act and the relevant parts should be applied.

Work Area Precautions

Barricade or fence off the work area

All excavated holes should be covered outside of work hours

Use earmuffs, safety glasses and dust masks where required

Always wear suitable clothing and safety footwear

Do not allow children inside the work area

Safety warning signs should be erected where the project meets public land.
